sentinel-2

European Space Agency

# Sentinel Missions

## Joint EU-ESA Copernicus Space Programme

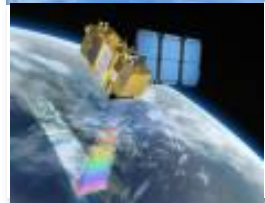

### Long-term Continuity and Access to suitable EO data

- Free, full and open data policy\*

#### **Sentinel 1 – SAR imaging**

All weather, day/night application e.g. flood mapping

#### **Sentinel 2 – Multi-spectral**

Land applications: urban, agriculture  
Continuity of Landsat

**Sentinel 3 – Ocean and land monitoring**  
Wide area monitoring of vegetation, sea/land surface

2016

2015 & 2016

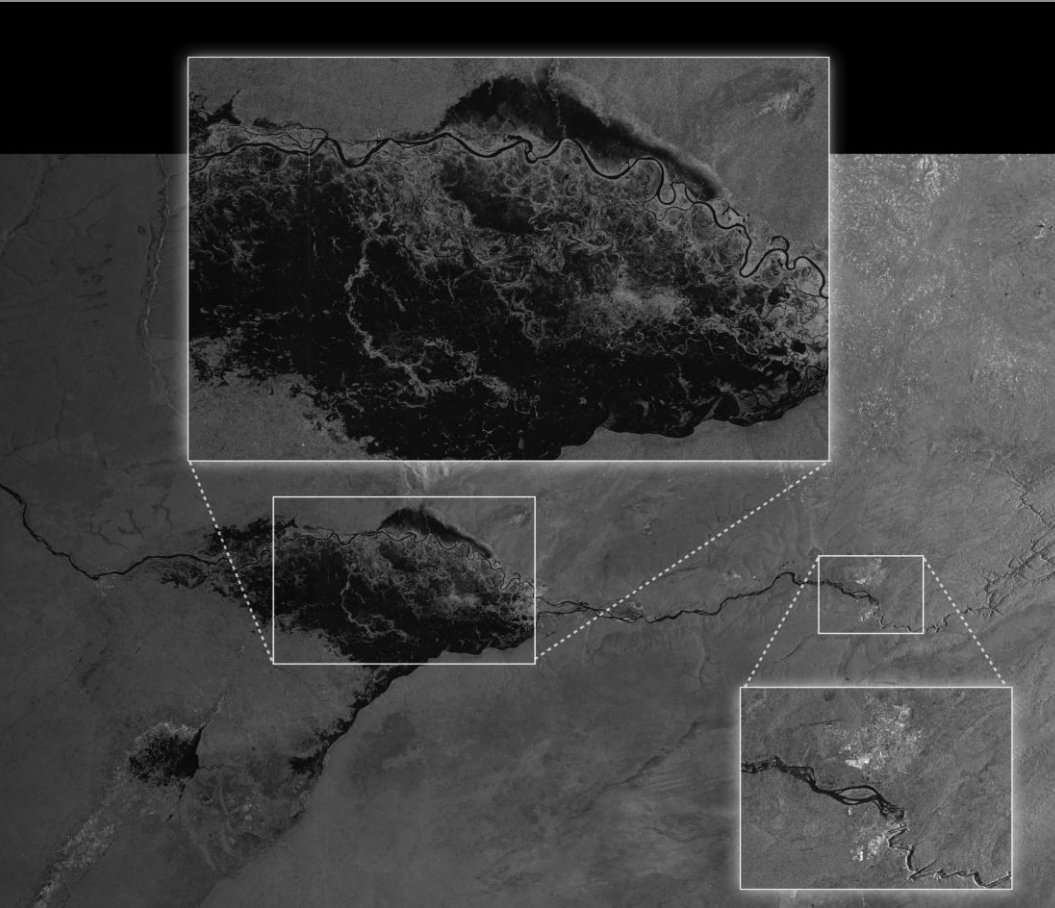

2015 & 2016

OPERATIONAL

\* Joint EU/ESA Data Policy Principles adopted by ESA member states in Sep '09, EU in 2014

# Operational Satellite Observations: SENTINEL-1 – Start of the Sentinel era

One of the first S1 images (Nambiaru):  
IW mode – 20 m flood extent

# Copernicus Sentinel-2

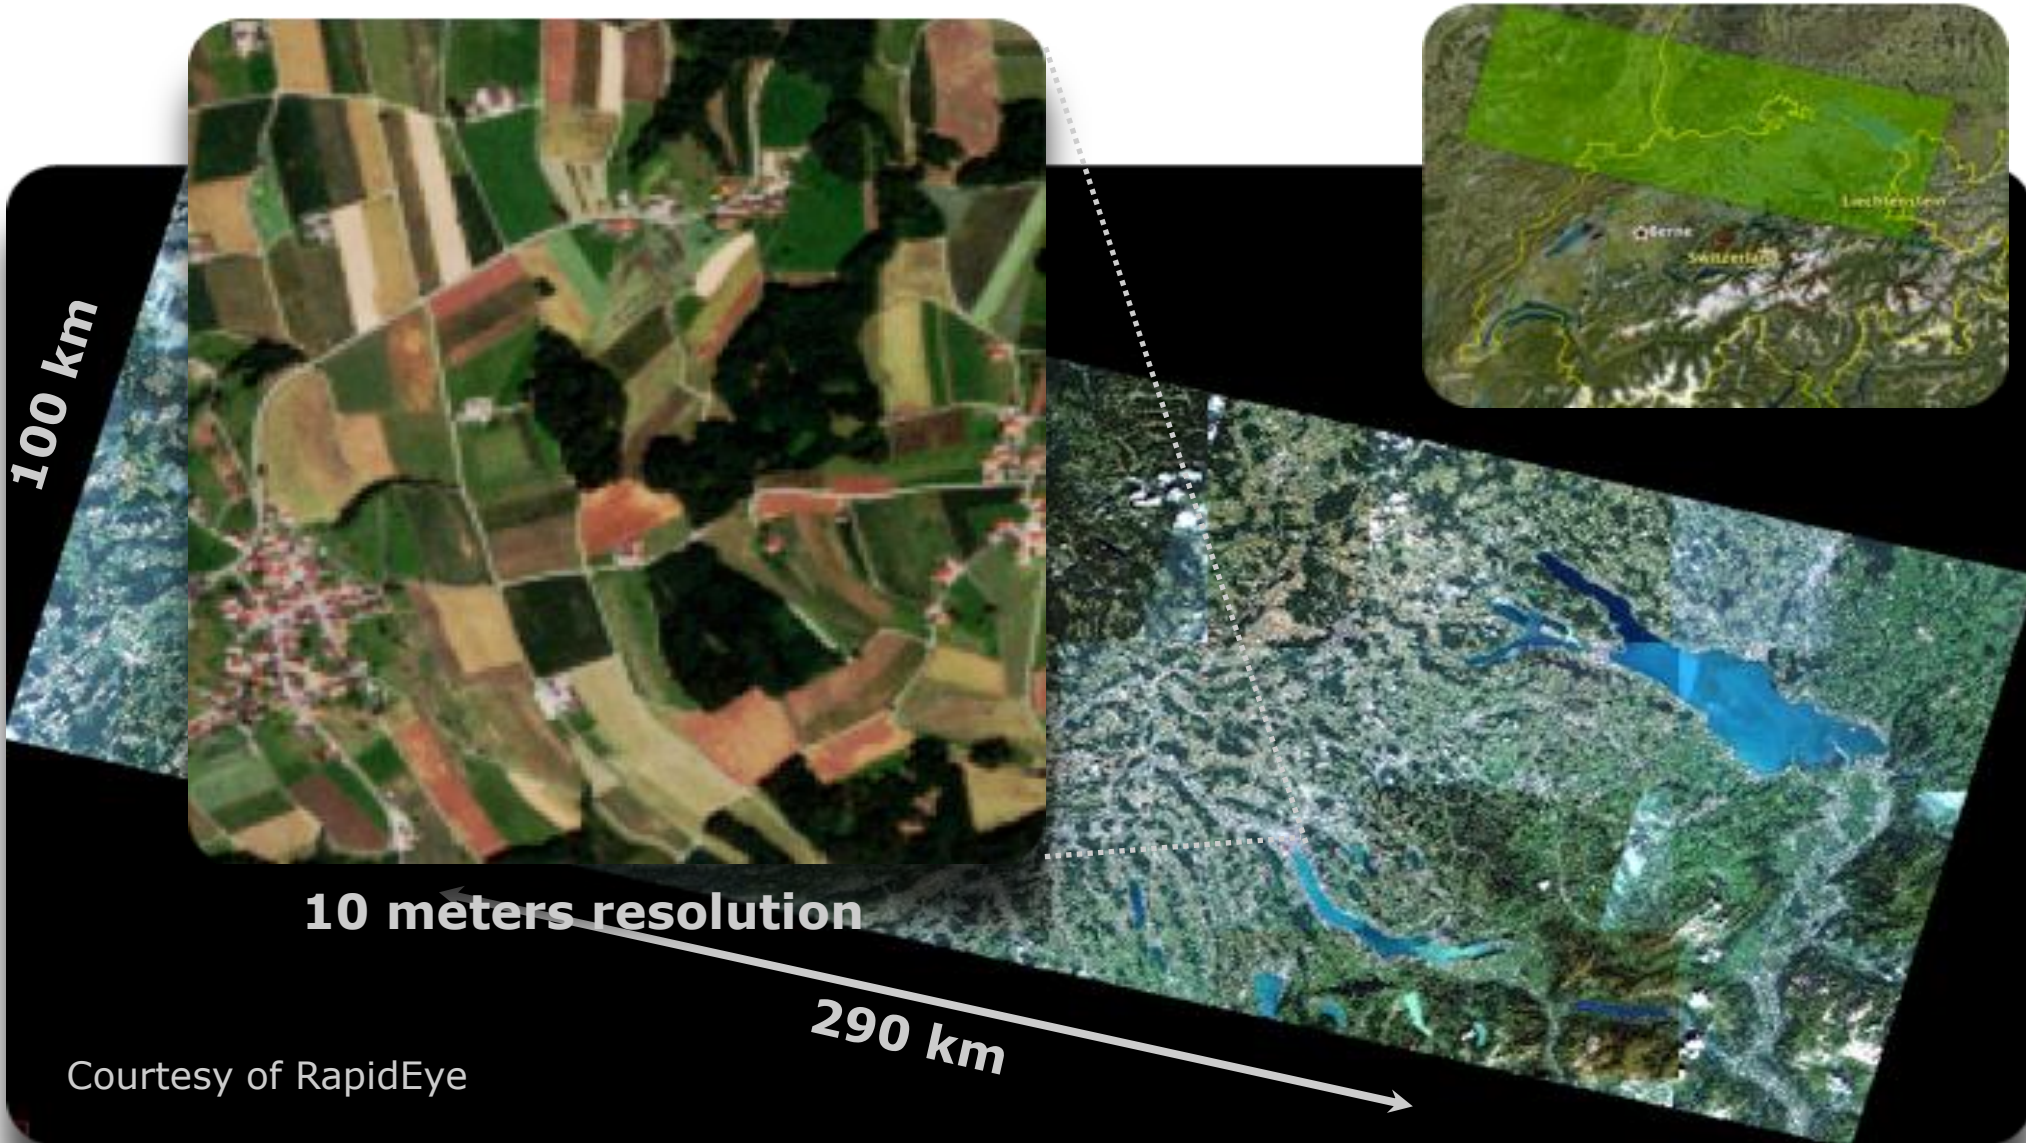

## Multispectral High Resolution Optical Imager

- Launch: 2015, 2016, ...
- 13 bands (VIS, NIR & SWIR)
- 290 km swath at 10, 20 and 60 m
- Systematic acq. of all land and coasts
- 5 days repeat cycle with 2 satellites
- 7 years design lifetime (max. 12 yrs)

# Sentinel-2: Coverage & Resolution

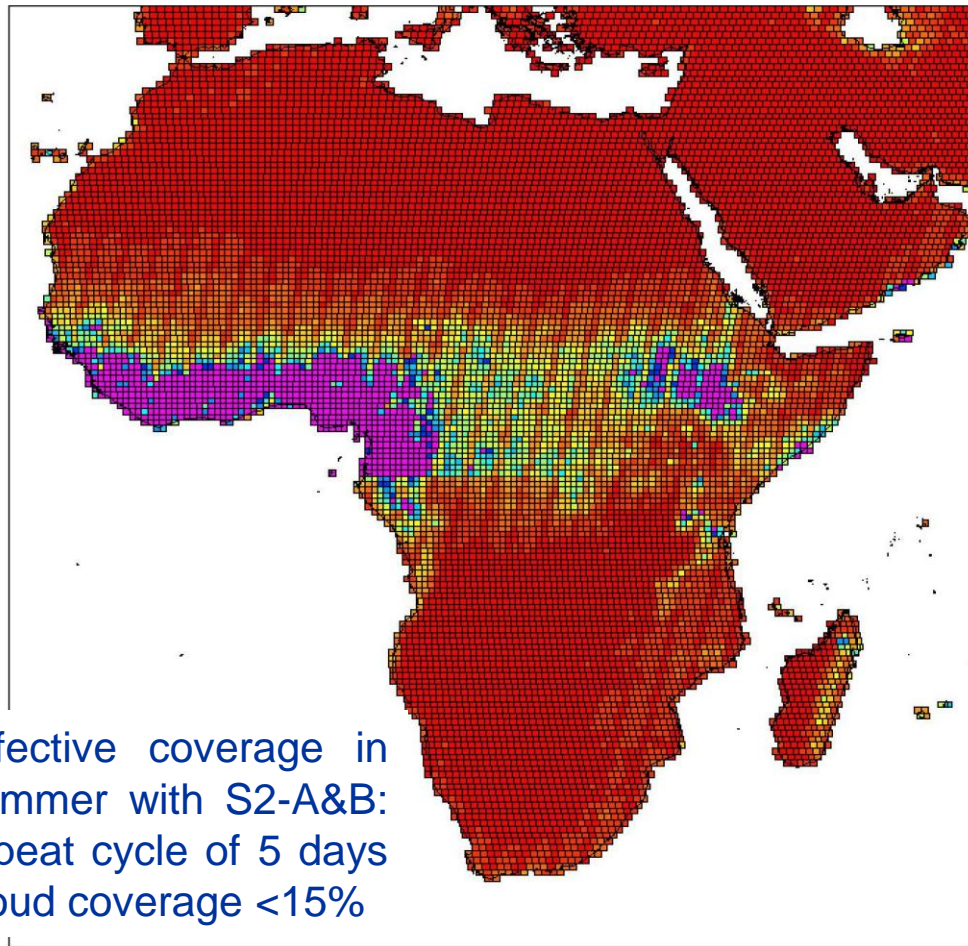

10 m resolution for field scale mapping

Courtesy of RapidEye

# Sentinel-2 Revisit Time Capability

## 5 days revisit for crop dynamics

Effective coverage in summer with S2-A&B: repeat cycle of 5 days cloud coverage <15%

days

South Africa JECAM site: 5 days revisit, February-June 2013 - RapidEye

➡ Monthly cloud free composites possible for most areas

# Sentinel-2A: < 1 year to launch

launch not before 30<sup>th</sup> of April 2015

# Sentinel-2 development status

Sentinel-2A and -2B platforms at AirbusDS Germany

# Sentinel-2: MSI spectral bands

Landsat 8  
OLI bands

# MSI VNIR SNR performance

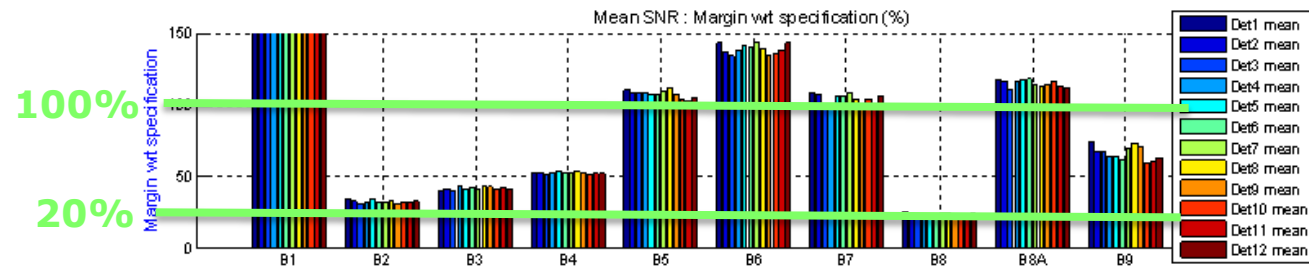

MSI mean SNR budget based on VNIR PFM FPA measurements

→ Exceeds the requirement with **margin >20%** over the full FPA

→ More than **100% margin** for the Red Edge bands

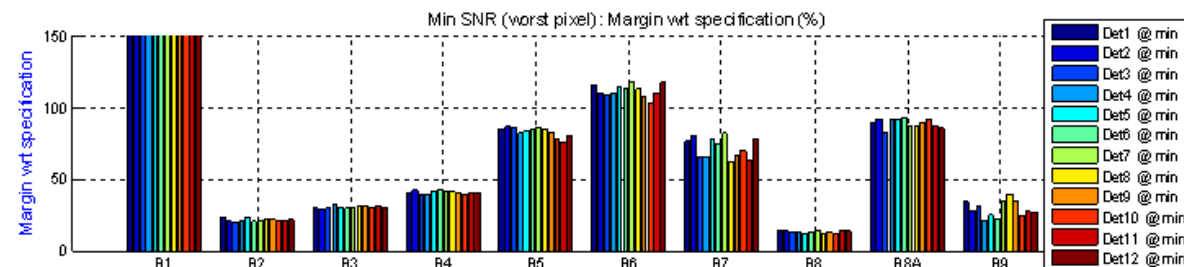

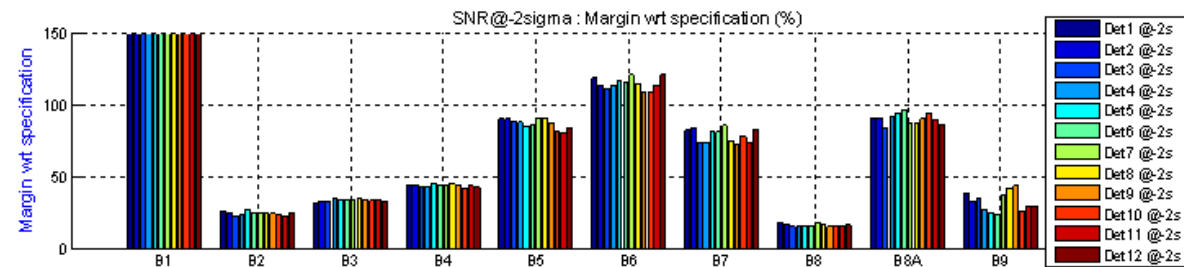

SNR measurements for VNIR bands at MSI level

Margin wrt specifications [%]

SNR requirements for VNIR bands

Band	Lmin	Lref	Lmax	SNR @ Lref
	$W.m^{-2}.sr^{-1}.mm^{-1}$	$W.m^{-2}.sr^{-1}.mm^{-1}$	$W.m^{-2}.sr^{-1}.mm^{-1}$	
B1	16	129	588	129
B2	11.5	128	615.5	154
B3	6.5	128	559	168
B4	3.5	108	484	142
B5	2.5	74.5	449.5	117
B6	2	68	413	89
B7	1.5	67	387	105
B8	1	103	308	174
B8a	1	52.5	308	72
B9	0.5	9	233	114

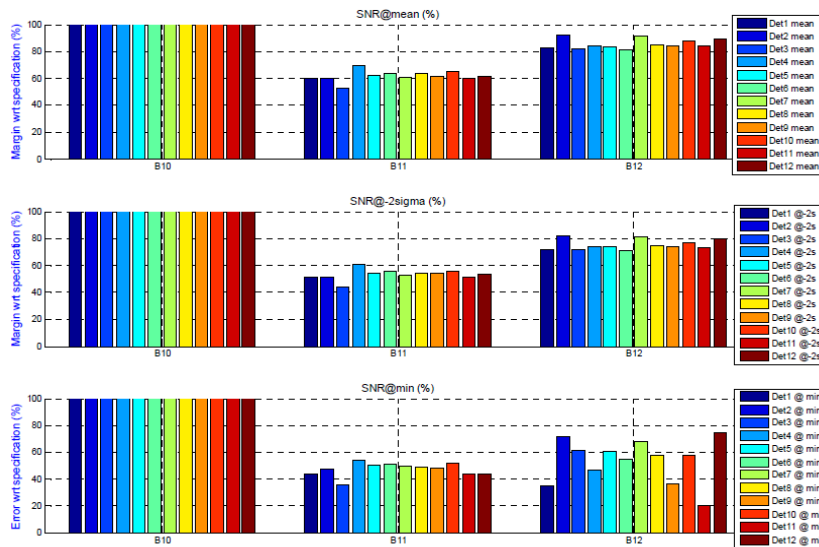

# MSI SWIR SNR performance

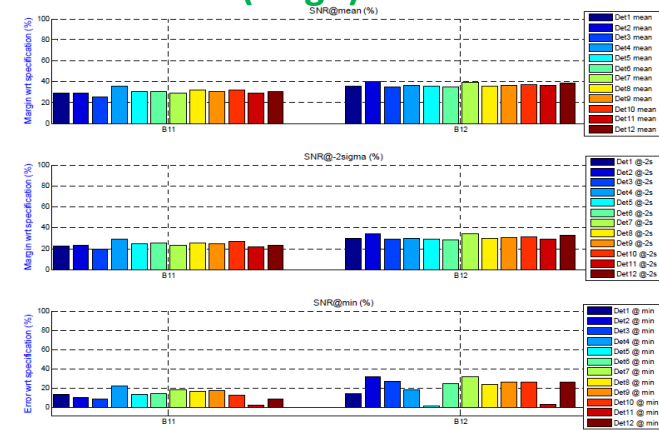

MSI mean SNR budget based on SWIR PFM FPA measurements

- Exceeds the requirement with **margin > 50%** over the full FPA @ LRef
- Exceeds the requirement with **margin > 20%** over the full FPA @ Lhigh
- Consistent performance between test at SWIR FPA and MSI level

SNR measurements (Lref) for SWIR bands at FPA level

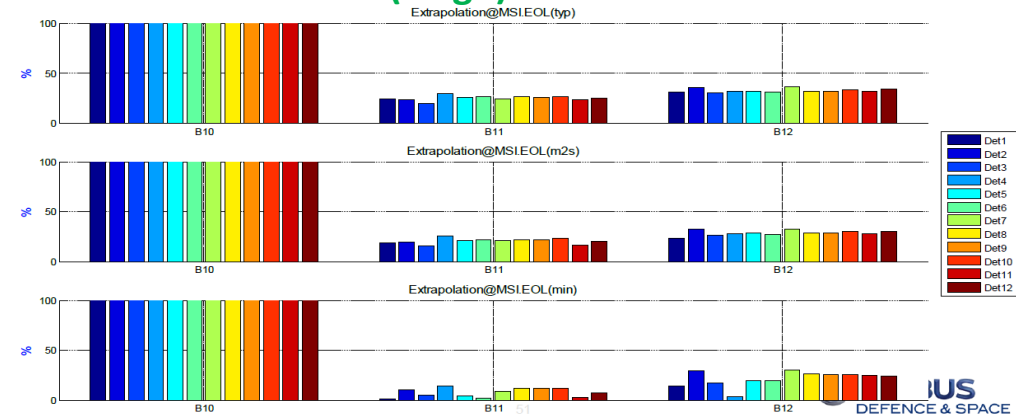

SNR measurements (Lhigh) for SWIR bands at FPA level

SNR requirements for SWIR bands

Band	Lref	Lhigh	SNR @ Lref	SNR @ Lhigh
	$W.m^{-2}.sr^{-1}.mm^{-1}$	$W.m^{-2}.sr^{-1}.mm^{-1}$		
B10	6	n/a	50	n/a
B11	4	32	100	504
B12	1.7	11	100	475

SNR measurements (Lhigh) for SWIR bands at MSI level

# Sentinel-2 User Products List

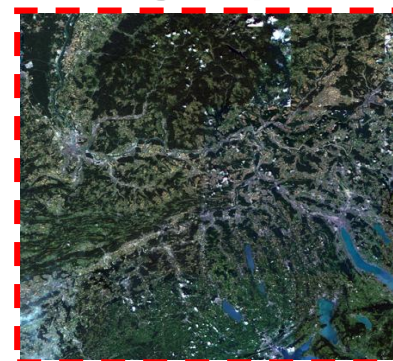

Name	High-level Description	Production	Preservation Strategy	Volume
<b>Level-1B *</b>	Top-of-atmosphere reflectances in sensor geometry.	Systematic	Long-term	~27 MB (each 25x23km <sup>2</sup> )
<b>Level-1C</b>	Top-of-atmosphere reflectances in cartographic geometry.	Systematic	Long-term	~500 MB (each 100x100km <sup>2</sup> )
<b>Level-2A**</b>	Bottom-of-atmosphere reflectance in cartographic geometry	On client side (using Sentinels Exploitation Tool)	N/A	~600 MB (each 100x100km <sup>2</sup> )

\*: The use of Level-1B product requires advanced expertise in geometrical processing.

\*\* : ESA is preparing for systematic L2a processing

- Top-of-atmosphere (TOA) reflectance in cartographic geometry (UTM/WGS84).
- Image radiometry key features:
  - ✓ Radiometrically corrected data.
  - ✓ Reflectance coded in 12 bits.
  - ✓ Product includes all necessary parameters required to convert the provided reflectance into radiances.
- Image geometry key features:
  - ✓ Orthorectification uses an 90m-resolution DEM.
  - ✓ Sub-pixel multi-temporal registration between images.

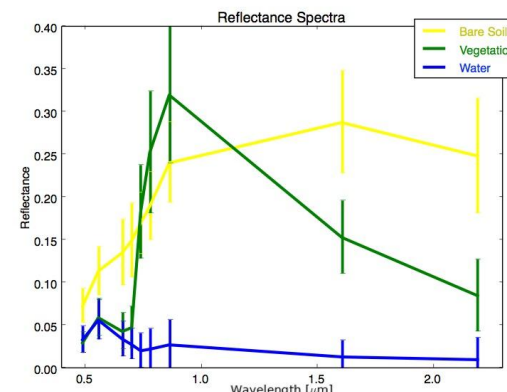

100km x 100km tile

## Bottom-of-atmosphere (BOA) reflectance in cartographic geometry (UTM/WGS84)

➔ ESA is preparing for systematic L2a processing

Products additionally include:

- ✓ Scene Classification Map
- ✓ Water Vapour Map
- ✓ Aerosols Optical Thickness Map

Algorithm includes:

- ✓ Cloud and cloud shadow detection.
- ✓ Cirrus detection and correction.
- ✓ Slope effect correction.
- ✓ BRDF effect correction.

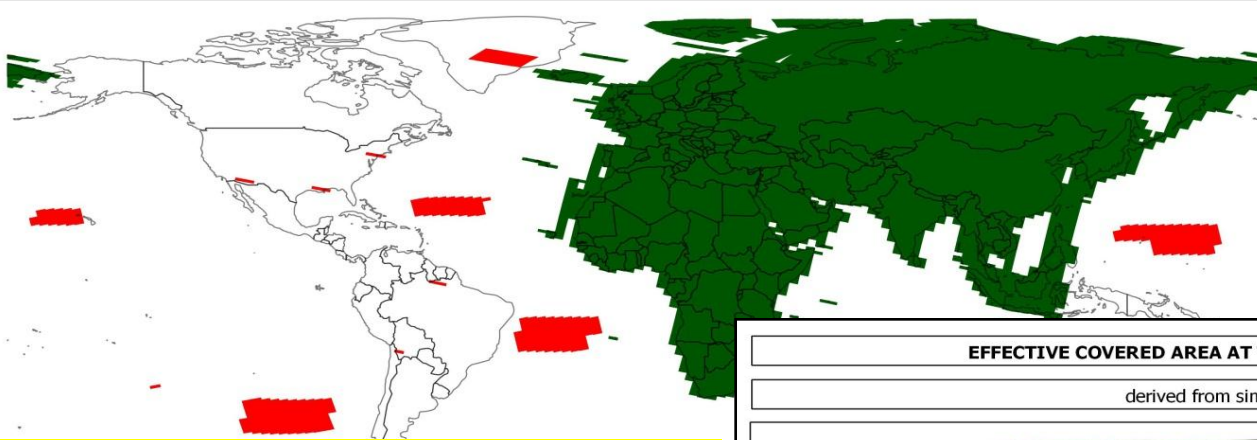

# There will be gradual ramp-up until the Full Operational scenario is reached

## EFFECTIVE COVERED AREA AT THE BEGINNING OF RAMP UP PHASE 1

derived from simulated swath - cleared for lead in/out datatakes

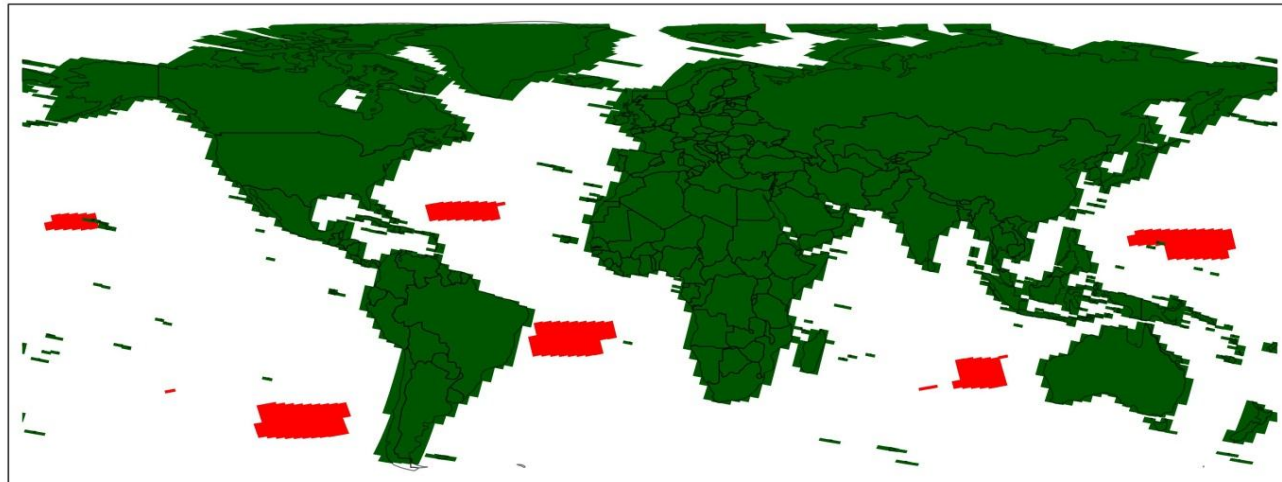

## Start of ramp-up phase (after commissioning phase)

- Assuming availability of 2 downlink stations out of 4
- Ensuring coverage of global Cal/Val needs
- Ensuring COPERNICUS CORE datasets needs for Europe/Africa systematically
- Ensuring maximum coverage/orbit length for GRI generation

## EFFECTIVE COVERED AREA AT THE END OF THE RAMP UP PHASE (FULL OPERATIONALITY)

derived from simulated swath - cleared for lead in/out datatakes

### Legend

Acquisition Area

■ Regular

■ Calibration Purposes (outside the regular acquisition area)

Products will become available immediately, data quality will be refined until full GRI (Global reference Image) is available

**End of ramp-up**

A major European Earth Observation Ground Segment design challenge

- ❑ **Systematic processing and availability** of the complete acquired data
  - ➔ corresponding to a sustained generation rate (24h/7d) of a continuous stream of  
**500Mb/s of user products** (Sentinel-1,-2,-3 A series)  
**1700 Gbyte per day from Sentinel-2 (for Level 1C)!**
- ❑ Distributed interconnected network of centres (improved redundancy)
- ❑ Local centre access capacity built on top of a **powerful and scalable network**

Including **Big Data paradigm** and use of innovative solutions

- ❑ Progressive inclusion of **Research Support & Hosted Processing services**
- ❑ **Enhanced connectivity** to international scientific network (e.g. GEANT)
- ❑ **Federation of distributed data pick-up points** to optimise proximity to end users

# Simulated Sentinel-2 Time Series

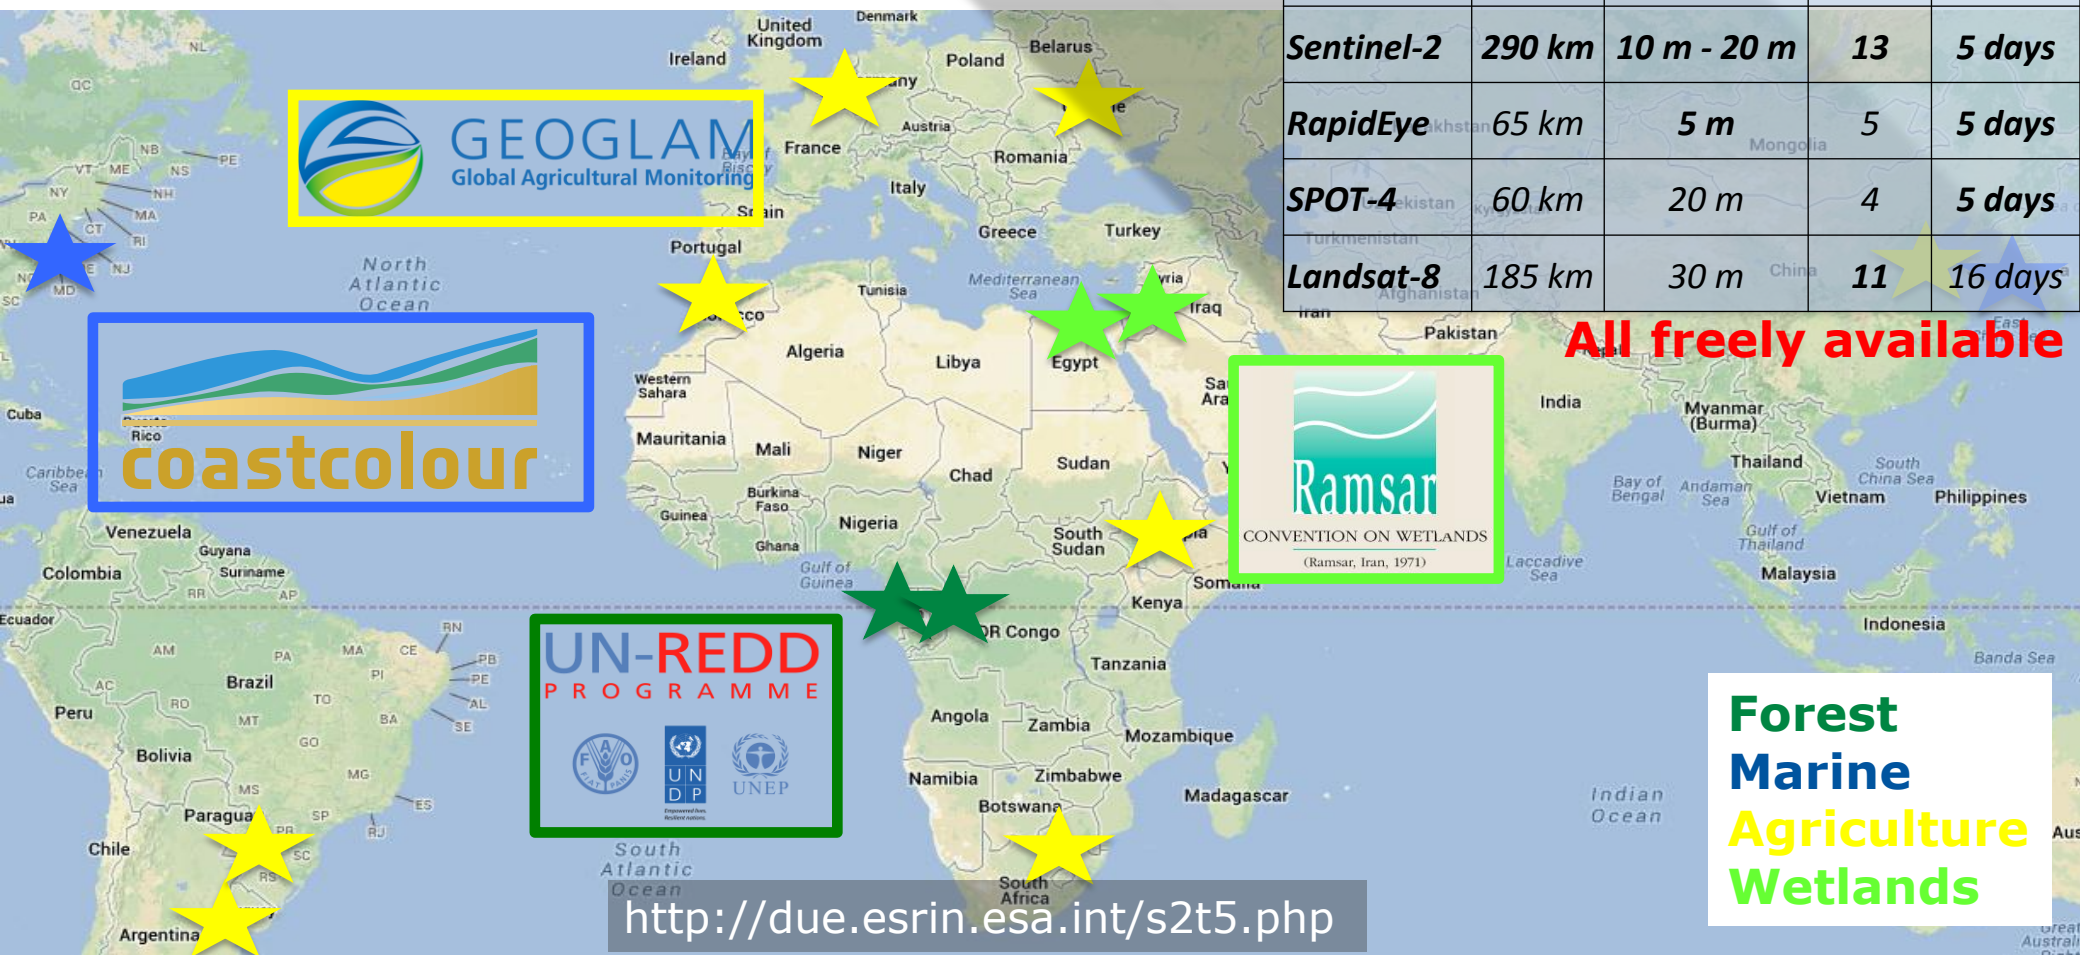

(in partnership with Take 5 initiative of CNES/CESBIO)

- 14 ESA sites, **globally distributed with international partners**
- Multi-sensor & multi-temporal data set (February-June 2013)

	Swath	Resolution	Bands	Revisit
<i>Sentinel-2</i>	290 km	10 m - 20 m	13	5 days
<i>RapidEye</i>	65 km	5 m	5	5 days
<i>SPOT-4</i>	60 km	20 m	4	5 days
<i>Landsat-8</i>	185 km	30 m	11	16 days

**All freely available**

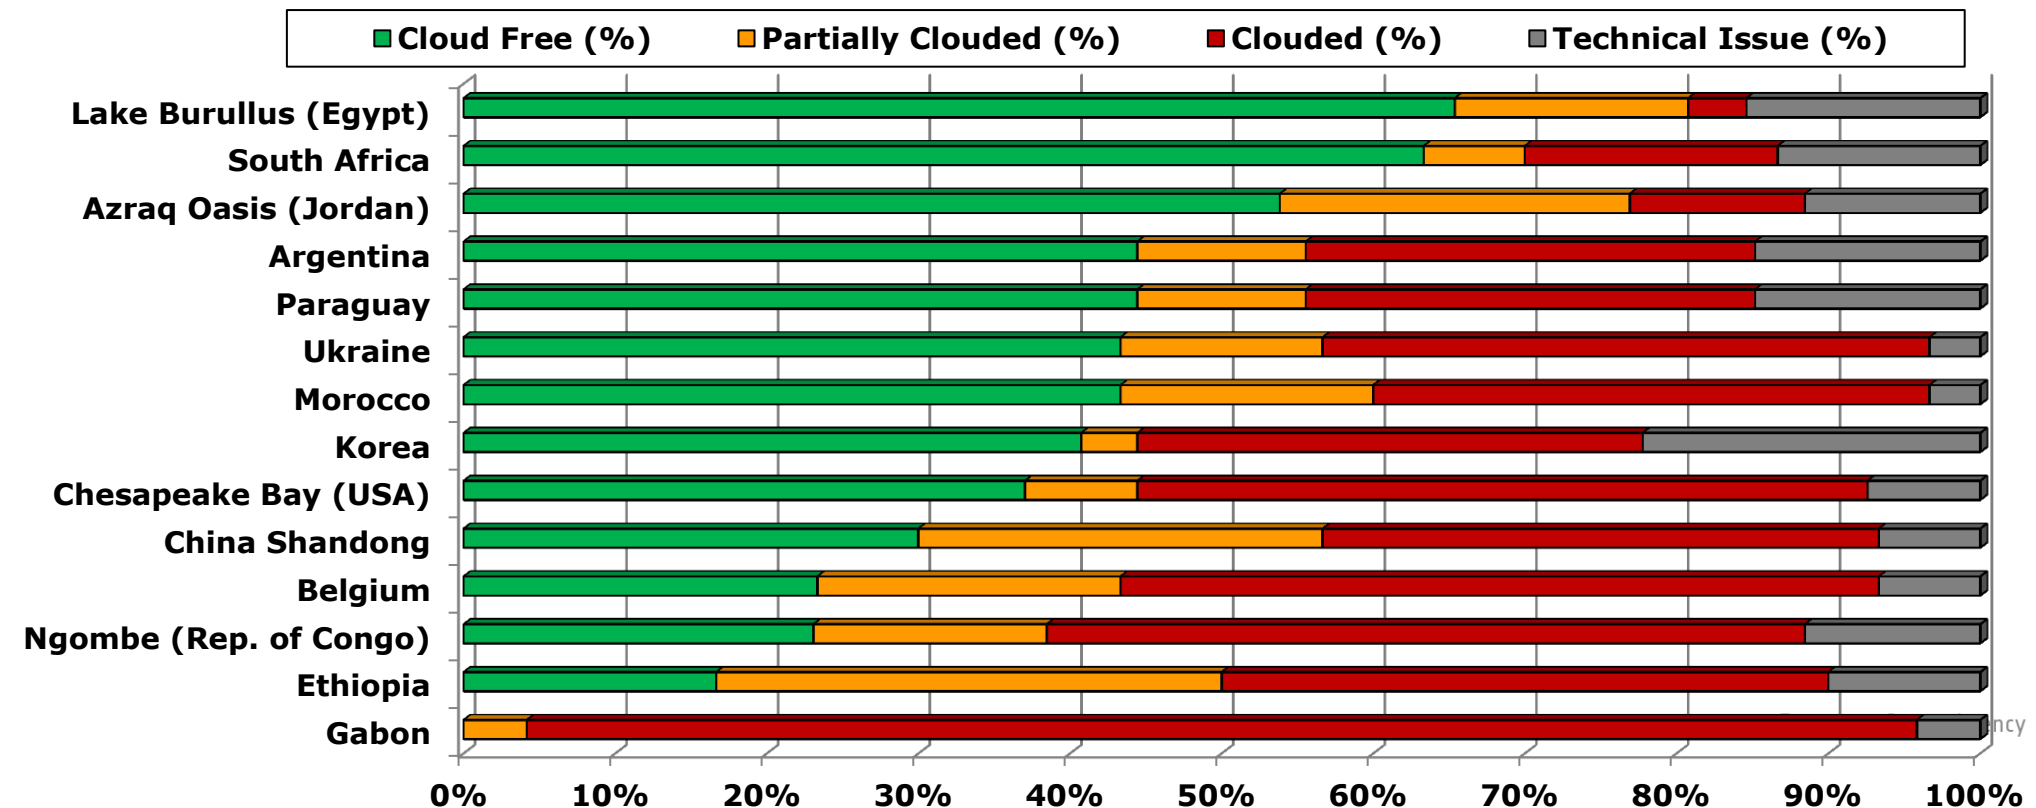

<http://due.esrin.esa.int/s2t5.php>

# Overview of S2 Time Series: RapidEye

- Total of 390 acquisitions, 24-30 per site
- 38% cloud free of total acquisitions (0-65% at site level)
- Even with 5 days repeat, low coverage over Europe during growing season

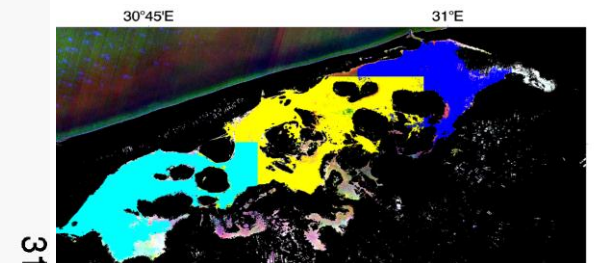

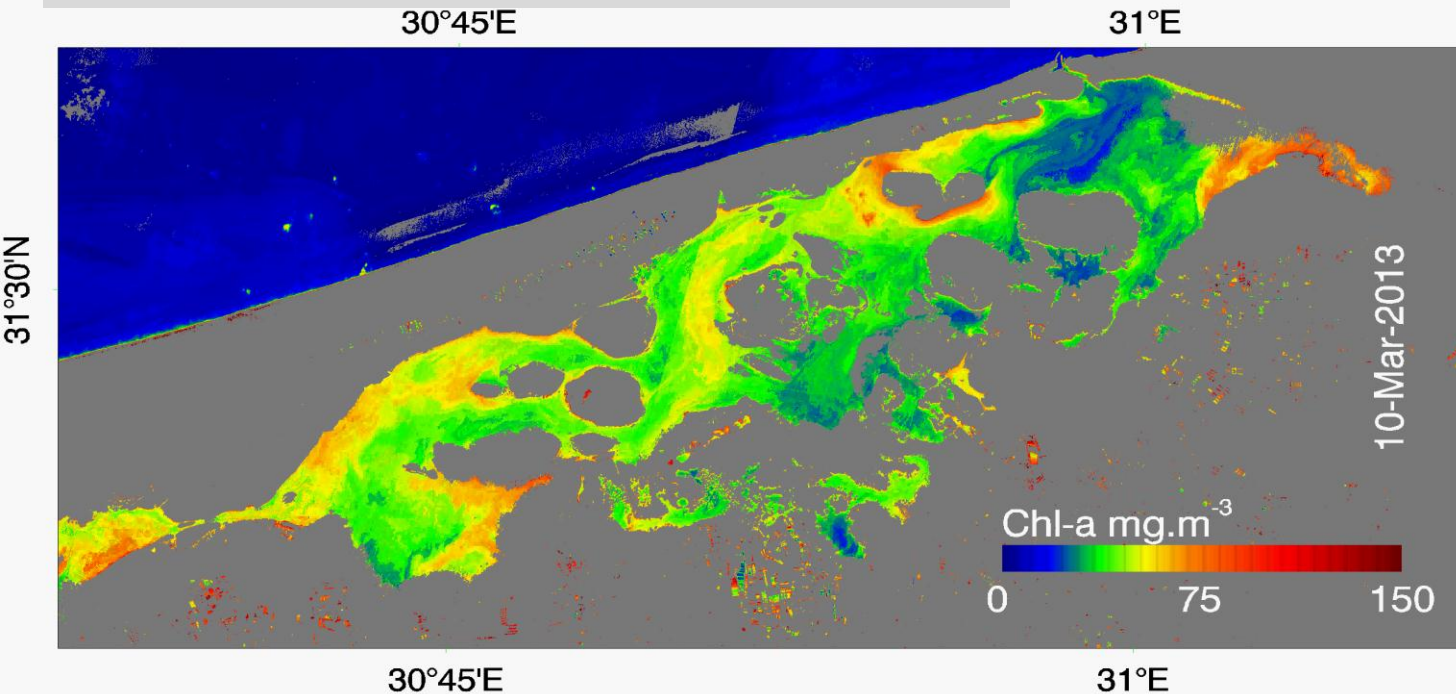

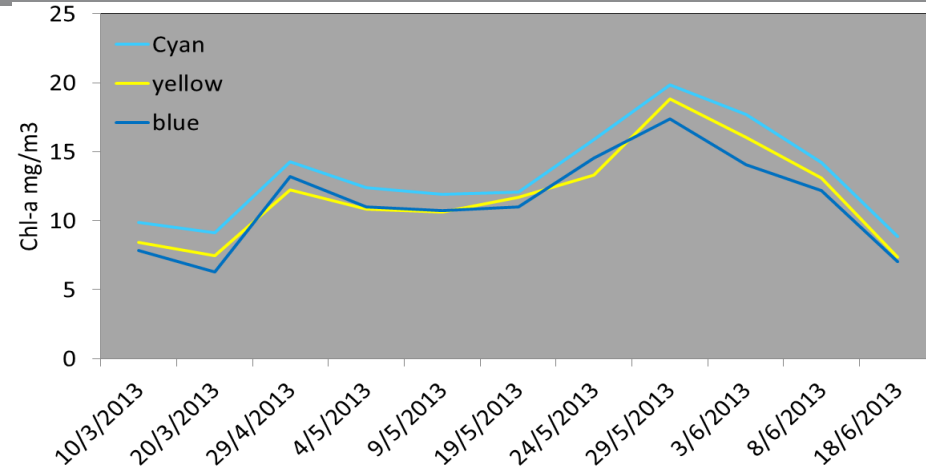

# Inland Water: Spot4 products of Chl-a (preliminary results)

Spring and summer blooms are shown for three spatially averaged regions

The regions seem to have the same temporal behavior

The start of the summer bloom is delayed in the middle region

Farag, H. and Salama, M.S., (2014) Sentinel-2 Red-Edge Bands Capabilities on Retrieving Chlorophyll-a in Turbid Water, Case Study: Lake Burullus, Egypt. *In preparation.*

## Special Issue "Lessons Learned from the SPOT4 (Take5): Experiment in Preparation for Sentinel-2"

### This Special Issue calls for lessons learned from Take5 experiment:

- pre-processing methods (ortho-rectification, atmospheric correction, cloud detection, monthly syntheses)
- calibration and validation of reflectance and bio-physical variables
- suitability of Sentinel-2 time series as a function of applications
- new processing methods for applications of time series of high resolution images

## Towards exploitation of Sentinel-2 for local to global agricultural monitoring – a contribution to GEOGLAM

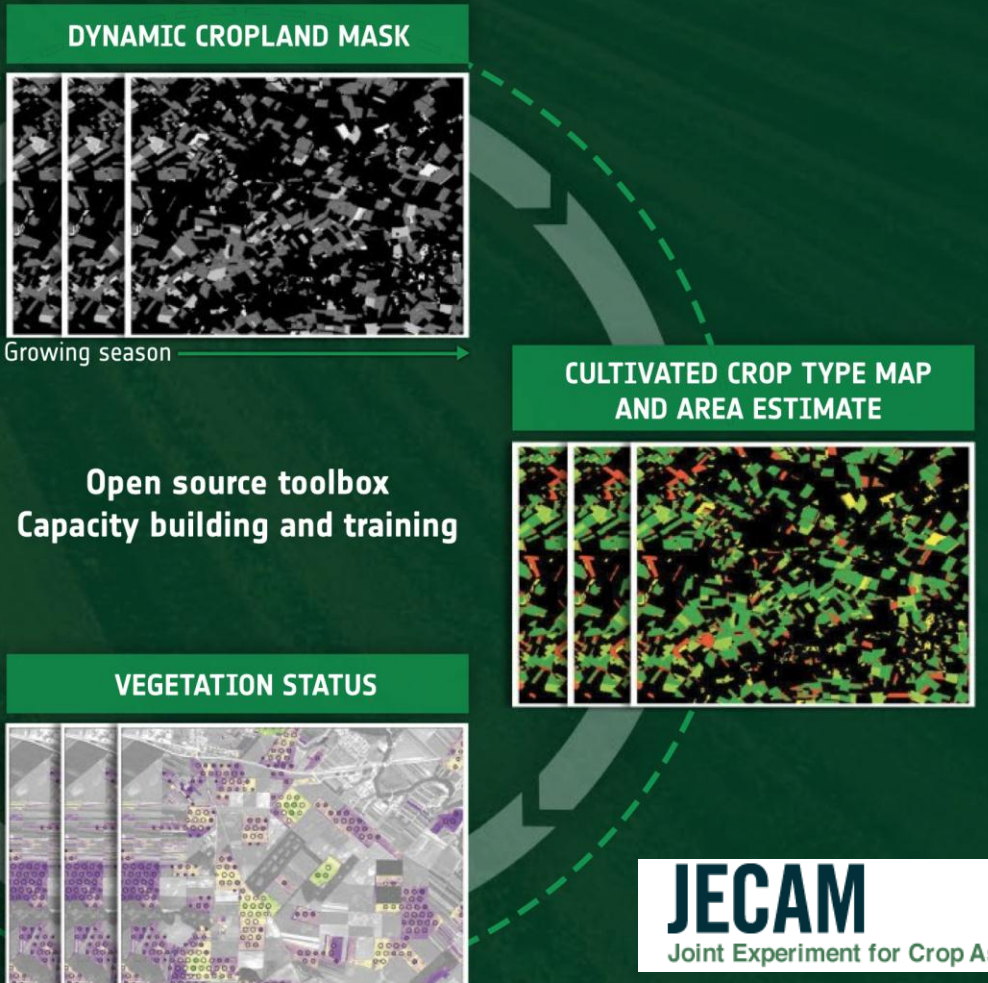

### Project

**UCL**

Université  
catholique  
de Louvain

**GEOGLAM**  
Global Agricultural Monitoring

### Key Users

**JECAM**

Joint Experiment for Crop Assessment and Monitoring

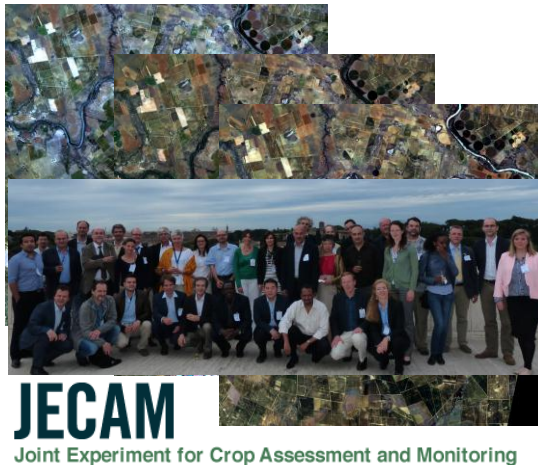

sentinel-2

→ AGRICULTURE

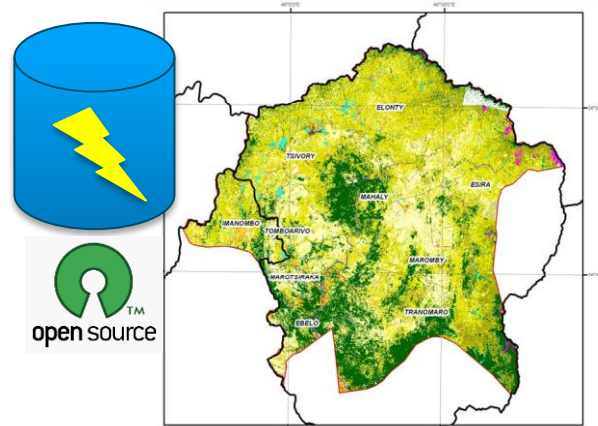

# Sentinel-2 for Agriculture: Objectives & Concept

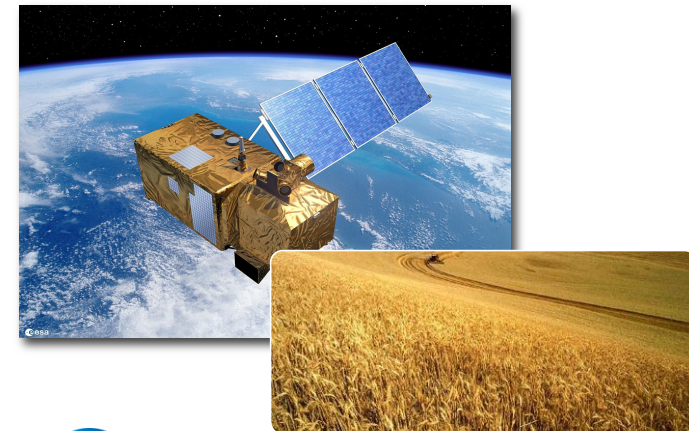

Algorithm  
Development

Prototypes of  
EO products

Demonstration  
& Validation

## Main Design Activities:

- User Requirements
- EO product specification
- Algorithm Development

## Processing System:

- 4 agricultural EO products
- Open source system
- Testing & validating of EO prototypes (12 sites)

## Use cases:

- 3 national coverages & 5 local sites (290x290 km)
- Validation of EO products
- Transfer to national users

# Sentinel-2 Data volume estimation

## Agriculture monitoring use cases

<i>Preliminary estimation of Sentinel-2 data</i>	<b>Local Case (290x290 km)</b>	<b>National Case (500 000 km<sup>2</sup>)</b>
Single observation (level 1C)	≈ 3,5 GBytes	≈ 21 GBytes
6 months time series with 5 days cycle	≈ <b>128 GBytes</b>	≈ <b>762 GBytes</b>
Monthly surface reflectance composite	≈ 56 GBytes	≈ 335 GBytes
10-d vegetation status product (6 months)	≈ 76 GBytes	≈ 455 GBytes
Monthly dynamic cropland masks	≈ 5 GBytes	≈ 30 GBytes
Cultivated crop type and area indicator	≈ <b>0,8 GBytes</b>	≈ <b>5 GBytes</b>

=> Data volume reduction from L2 to L3 but mainly from L3 to L4

=> Need a large bandwidth to retrieve S2 product and disseminate output

# Sentinel-2 for Climate Change CCI Land Cover

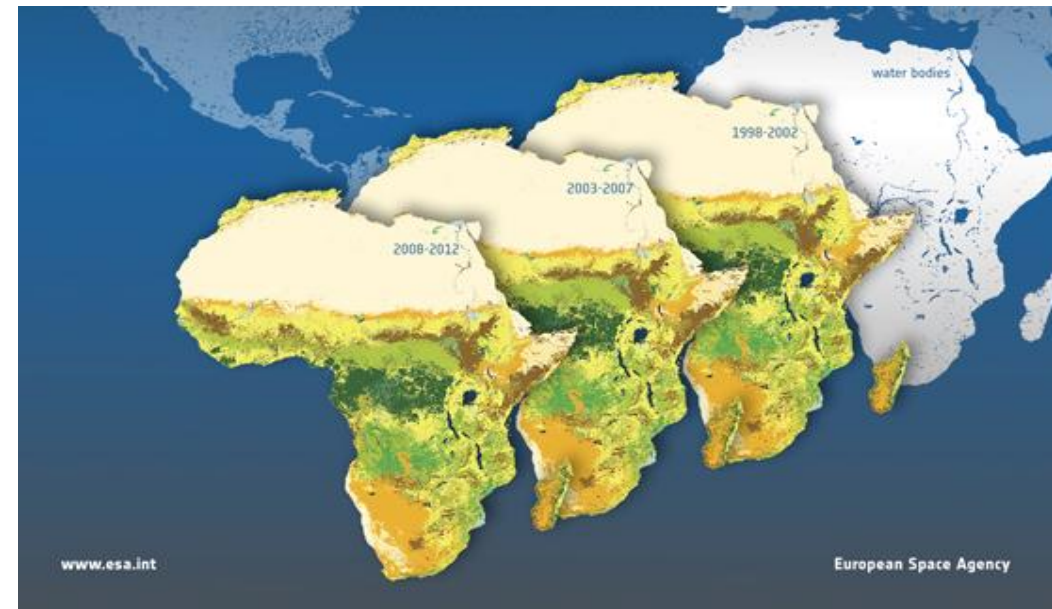

## Multiyear Global Land Cover Mapping

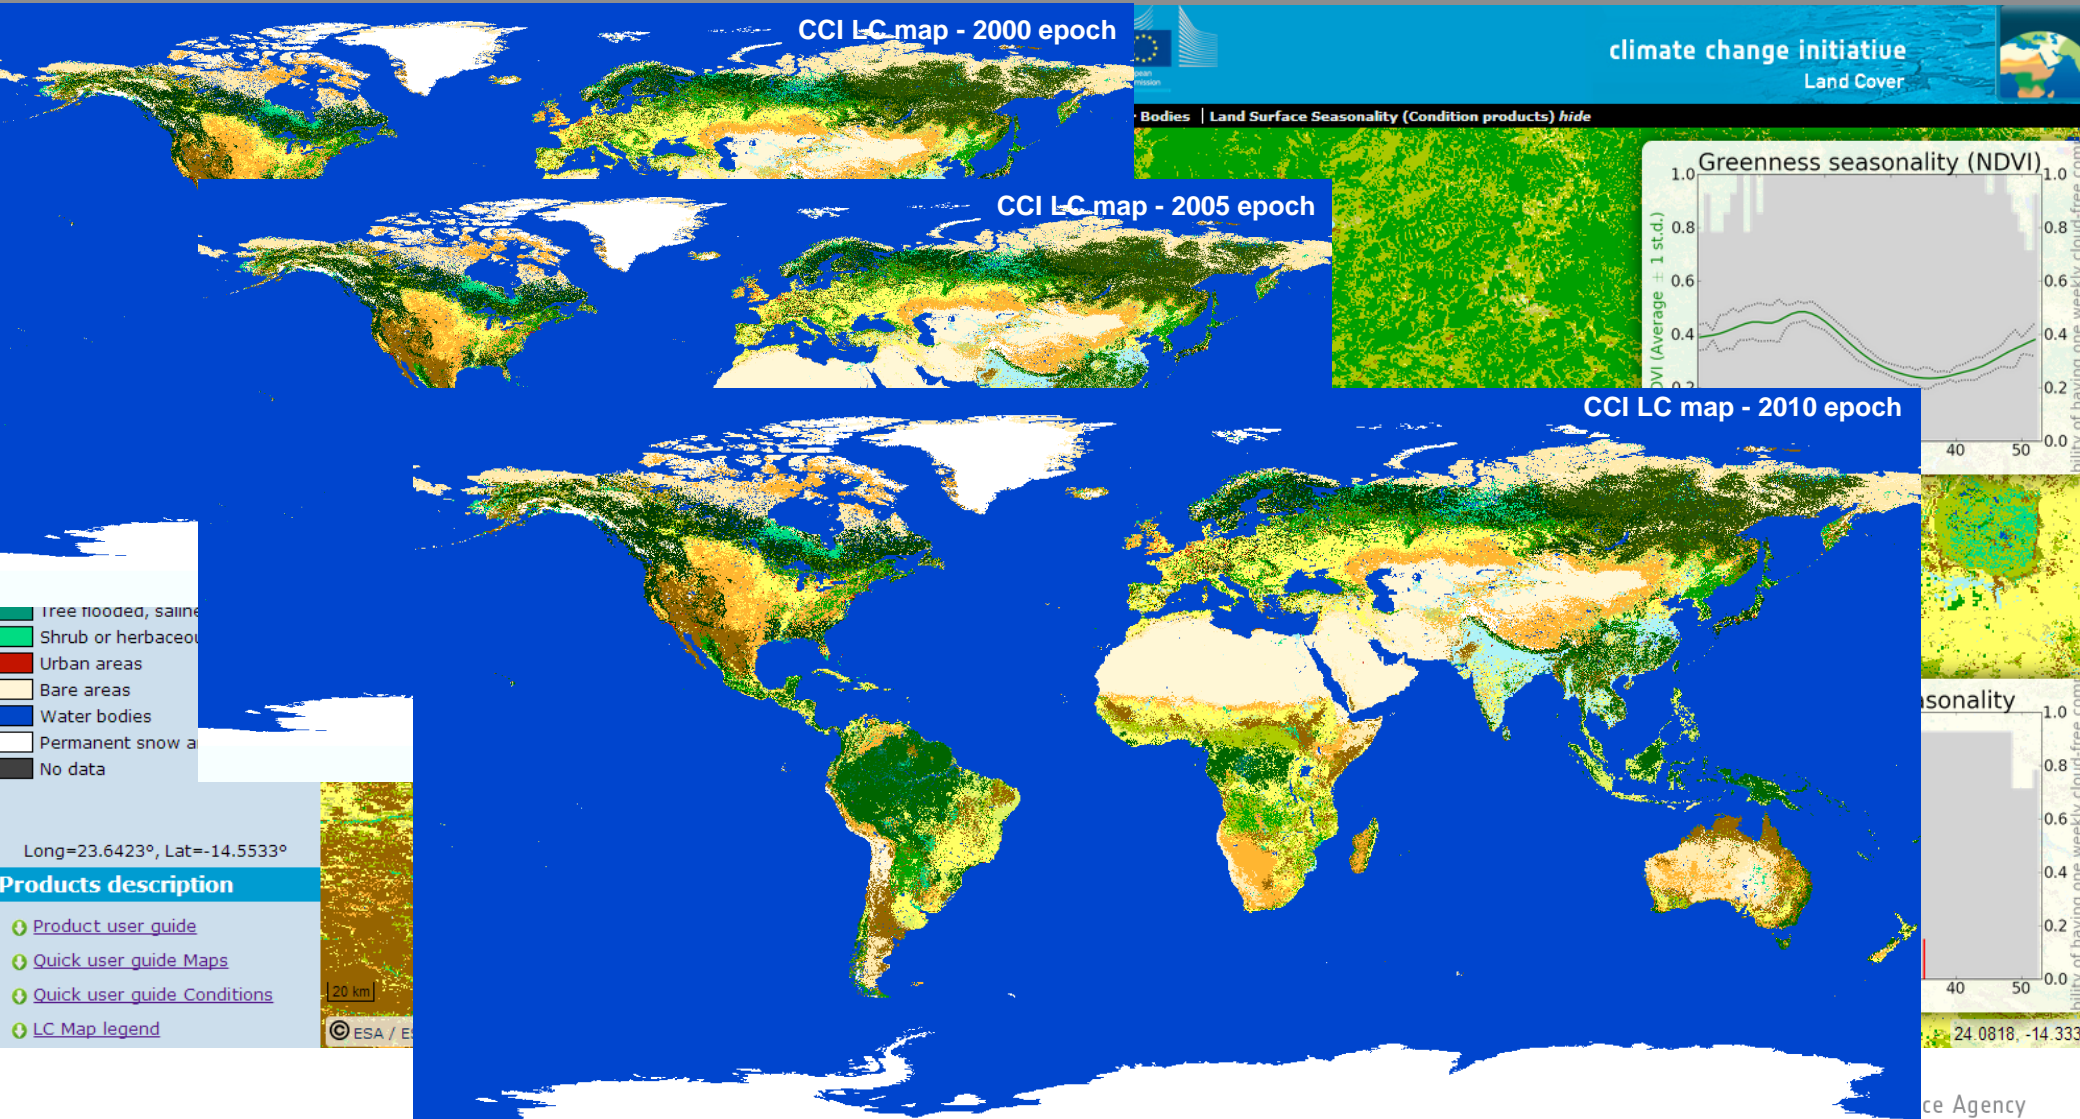

- 3 consistent global land cover products (P1:2000, 2005, 2010 & P2:1980, 1990, 2015)
- Global map of open permanent water bodies
- Development of an online validation tool

## Land Cover @ 10/20m for Africa

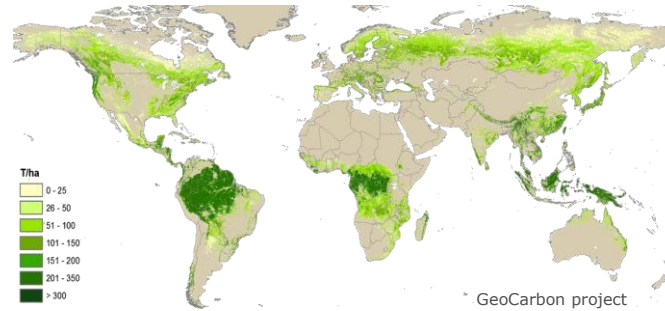

- Land cover product over Africa using S2 + L8
- User requirement target = 30 m
- HR relevant for Climate impact assessment & Mitigation strategy
- Analyze L8-S2 geolocation accuracy & inter-calibration
- Adaptation of L-8 & S2 preprocessing (cloud detection, Atm-Corr, BRDF)

# CCI Land cover results 300 meter global

# Sentinel-2 Science Community

## Sentinel-2 Science Workshops: 2012 & 2014

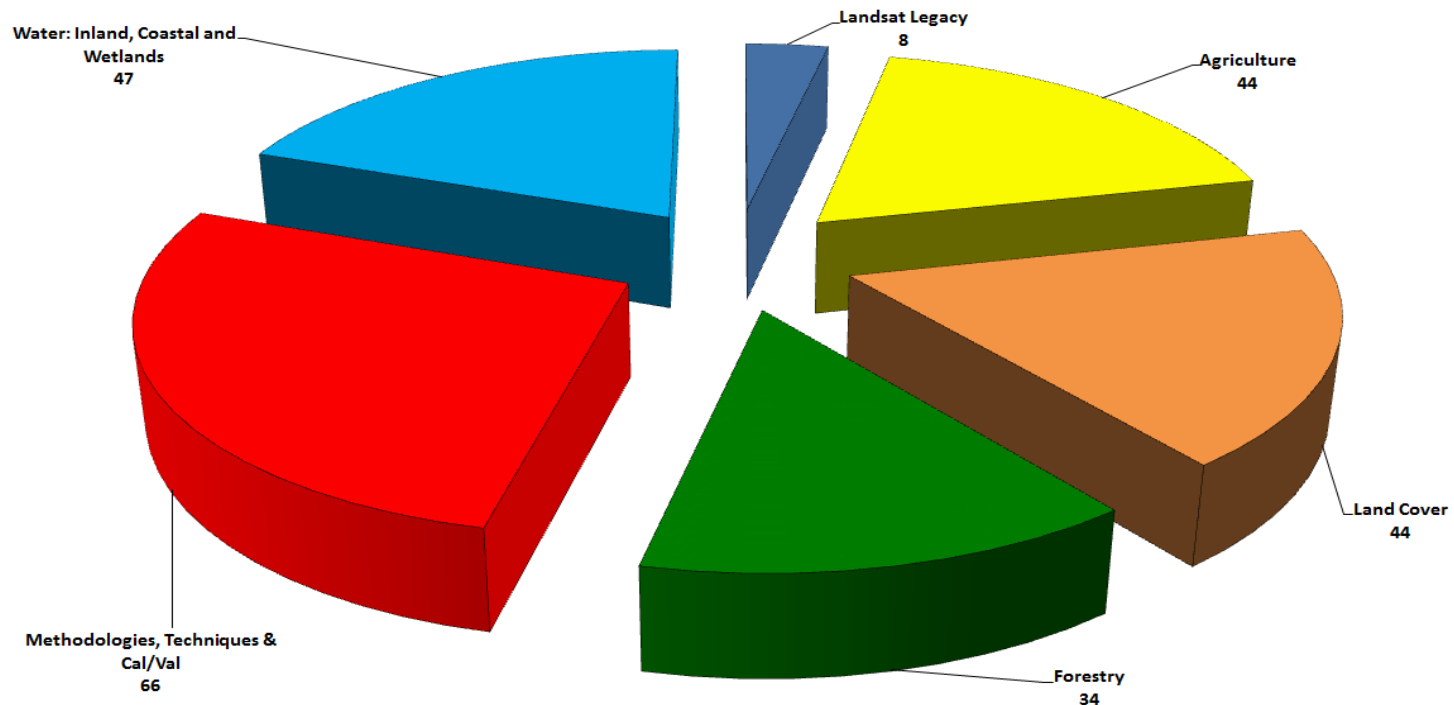

<http://www.s2symposium.org>

<http://seom.esa.int/S2forScience2014>

### Workshop 2014: 377 international attendees from 44 different countries

Sentinel-2 for Science Workshop 2014 - Number of Abstracts by Topic

# Sentinel-2 Science Community

## Summary & Recommendations

### **S2 Workshop 2012:**

- 28 recommendations (<http://www.s2symposium.org>) – 18 addressed e.g. data policy, time series analysis, L8-S2 inter-calibration

### **S2 Workshop 2014:**

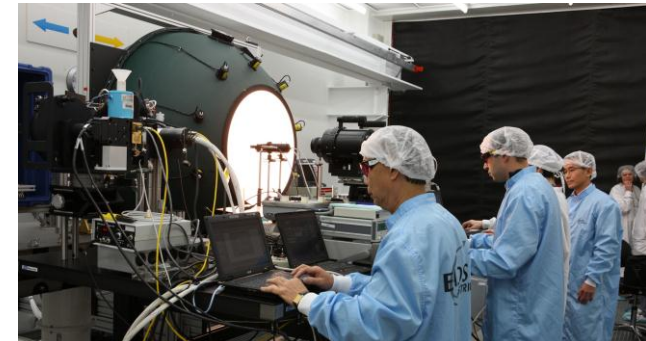

#	Main Recommendations
1	Emphasized Free & open data policy as well as efficient data access
2	Operational production of Level 2A (comparison exercises to develop community accepted best practices)
3	Tools and techniques for seamless use of Landsat and Sentinel-2 (compositing, cross-validation, compatibility of processing, time series)
4	Centralised and transparent CAL/VAL monitoring for the duration of Sentinel Program
5	Hosted processing - „bringing the algorithm to the data“ as well as for standard L3 products
6	Improved atmospheric correction - including over water surfaces
7	Synergy with SAR data and sensors at varying resolution

# NASA & ESA Sentinel-2 Research Cooperation

- Interest for **cooperation on joint R&D on S2 & L8** (NASA, Earsel LCLUC workshop, S2 Science Workshop)
- Algorithm development for composites and higher-level products based on S2 & L8
- Possibility for **parallel calls from ESA & NASA**
  - NASA: Land imaging science call in fall 2014,
  - ESA: S2-4SCI Land call in Q3/4 2014
  - Identify synergy and create complementarity in the calls. Encourage joint European-US teams
- **Ongoing collaboration** w/ NASA (JPPG) on S2/L8 data processing, Cal/Val, thermal convey study, Landsat 5/7/8 acquisition & processing

S2-L8 cross calibration

## **Innovator call** (currently open, €2,4 M)

- Respond to R&D agenda of major international initiatives
- R&D preparatory activities for S1 & S2 exploitation

## **Scientific Toolbox Development**

**S-2 Toolbox** (interoperable with S-1, S-3 Toolbox) – 1<sup>st</sup> Release Sep. 2014  
**€ 550,000**, 36 months, Kick Off Feb 2014  
open/source, multi-mission,

## **Research & Development Studies**

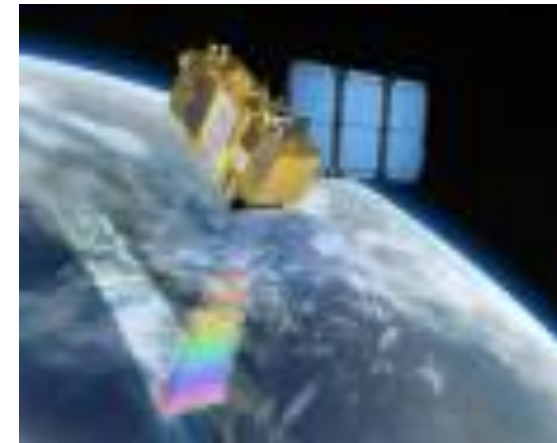

- **S2-4SCI Land (€ 1,2 M - Q4 2014):** proposed topics - Vegetation parameters, Classification, Calibrat./Validat., Cloud screening, Atmospheric Correction, Inland Water
- **SY-4SCI Synergy (€ 1 M under selection):** S2-3 Synergy Land Product, S1-2 Synergy Land Product, S1-2-3 Ocean Virtual Lab

## Operational Observations from Sentinel-2

- **Long-term, continuous & systematic information from local to global scale**
- **Responding to main user requirements – Land cover, Agriculture, Forest, Biodiversity, Lakes/coastal waters**
- **Open data policy & long-term continuity for sustainable uptake**

## Preparatory activities for full exploitation

- **R&D for optimized and validated EO products**
- **Interoperability with Landsat (frequency, historic archive)**
- **Facilitation of EO data access & handling**

## ▾ Welcome to Sentinel Online

Welcome to Sentinel Online, the ESA Sentinel website.

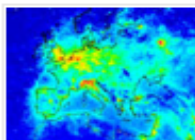

The site is constructed in such a way as to enable you to navigate easily through a variety of topics related to each Mission, Instrument, and their associated Data, as well as highlighting the Copernicus Thematic Areas served by the Missions. For more information see [About sentinel online](#).

The GMES (Global Monitoring for Environment and Security) program has been recently renamed by the European Union to 'Copernicus'. It shall be noted that currently the content of this Website refers to the terms GMES and Copernicus alongside.
